

Harvester Accessories

METALLECA® Harvester Accessories are applied in agricultural machinery. The agricultural machinery is rapid widespread and obviously improve the efficiency of agricultural production. The rapid development of agricultural mechanization is one of the important characteristics in modern agriculture. Especially, the modern intelligent manufacturing has accelerated agricultural mechanization, modern agriculture, and agricultural production to meet market demand. Therefore, the production of harvester and related machinery parts are gradually increasing in demand.

Product Description

As the professional manufacturer, we would like to provide you high quality METALLECA® Harvester Accessories. And we will offer you the best after-sale service and timely delivery. Due to our focused approach, timely delivery and ethical business policy, we have been able to gain tremendous success in this domain.

Low Price Harvester Accessories of Manufacturers

Well-run tools, qualified sales crew, and superior after-sales providers; We are also a unified huge spouse and children, all people keep on with the corporate value "unification, devotion, tolerance" for Good Quality China Manufacturer Lawn Mower Grass Cutter Adjustable Machine Tractor Accessories, To benefit from our strong OEM/ODM capabilities and considerate services, please contact us today. We will sincerely create and share success with all clients. Good Quality China Foton Combine Harvester, Kukjae Yanmar, Our company will adhere to "Quality first, , perfection forever, people-oriented , technology innovation" business philosophy. Hard work to keep making progress, innovation in the industry, make every effort to first-class enterprise. We try our best to build the scientific management model, to learn abundant professional knowledge, to develop advanced production equipment and production process , to create the first-call quality products and solutions, reasonable price , high quality of service , quick delivery , to provide you create new value .

Harvester Accessories Introduction

Our METALLECA® Harvester Accessories are manufactured by sand casting, gravity pouring and die-casting processes.

Those production processes have existed thousands of years and widely applicable today.

The advantage of the process is that complex structures and larger body shapes can use, such as Hydro generator housing.

On the other hand, the disadvantage of process is long production cycle, the rough surface, and the large size deviation. (except for die casting process)

In technical level:

1. Blank casting: quality stability (deformation, internal defects, etc.) get well control.
2. Machining & Assembly: high-precision processing, dimension tolerances meet standard, ensure compliant with assembly requirements.
3. Performance & Material: Customers specify U.S. standard aluminum ASTM A356.2. After T6 heat treatment aluminum, the strength and toughness are well matched that extends the life of the product. At the same time, the selection of aluminum in the equipment lightweight requirements have also been improved.

Harvester Accessories Parameter (Specification)

Production process	Material	Strength	Remark
Sand casting (gravity pouring)	ASTM A356.2 ZL104	Complex structure Lightweight equipment	Belongs to accessories
Aluminum die casting	A380/ADC12		

Harvester Accessories Feature And Application

In recent years, China's agricultural mechanization has developed prosperously, and various agricultural machinery has been developed to respond to rural needs.

Many farmers have their own agricultural machinery for improve agricultural production and grasp farming time.

The agricultural machinery purchase subsidy policy is introduced by our country, that encourage the farmers intention for buying agricultural machinery. For this reason, it has promoted the progress of agricultural mechanization in rapidly.

The METALLECA® harvester accessories are integrating high quality of assembly and performance.

The surface treatment is spray paint in gray. Therefore, the surface of the casting blank must be relatively smooth, free of porosity and pits, lack of material, without cracks and casting defects.

Since we accumulated casting blanks control experience in several years, the design of temperature of the molten aluminum, the speed of pouring, the exhaust, and the runner system are well controlled.

Product Details

Production process: gravity pouring /aluminum die casting + machining + surface treatment (spray paint, painting, sandblasting, oxidation)

Materials: aluminum alloy: ZL102 or ASTM A356.2 A380、ADC12

Surface requirements: customize (aesthetics, smooth, flat)

Deliver, Shipping And Serving

Transportation: by sea, by rail, by air

Shipping: pallets (plywood or fumigated wood), wooden case + lid + carton + corner protector + PE film

Delivery: FOB Ningbo or Shanghai recommend

Workshop photos: Machining equipment & Pouring
